

Step 3: How to Create a Send Connector in Exchange 2010

1. Open the **Send Connector** tab under **Server Management > Hub Transport** option
 2. Right-click in the empty space and select **New Send Connector**
 3. Ensure intended use field is set to **custom**.
 4. Enter **Vautastic** in **Name** field, then click **Next**
 5. Click **Add** in the **address space** window
 6. In the **address** field, enter **{domainprefix}.vaultastic.com**
 7. Select **Route mail through the following smart hosts**. Click **Add..**
 8. Select **FQDN**. Enter **o365-v4.vaultastic.com**. Click **OK**, then **Next**.
 9. Leave **smart host authentication** settings as **None**. Click **Next**.
 10. Choose the **Hub Transport Server's** that apply. Click **Next**.
 11. **Preview Configuration Summary**. On the **New Connector** page, review the configuration summary for the connector.

If you want to modify the settings, click **Back**.

To create the Send connector by using the settings in the configuration summary, click **New**.
 12. On the **Completion** page, review the following, and then click **Finish** to close the wizard:
 - A status **Completed** indicates that the wizard completed the task successfully.
 - A status **Failed** indicates that the task wasn't completed successfully. If the task fails, review the summary for an explanation, and then click **Back** to make any configuration changes.
-
