

Step 2: Add a Mail Route from CPanel to Vaultastic

Configure a mail route (SMTP connector) for the Vaultastic server on your CPanel domain to enable email archiving. This SMTP connector will be used to route mail from CPanel to Vaultastic.

To setup the mail route, you need to configure PREROUTER settings from the Exim Configuration Manager interface of CPanel.

1. Login to **WEB HOST MANAGER** using valid credentials.

2. From the left panel search box, search for **exim**. This will navigate you to the **Exim Configuration Manager** section quickly.

3. Click the **Exim Configuration Manager** button.

4. Select the **Advanced Editor** tab.

5. Locate the **PREROUTERS** section. To locate the section quickly, press the keys **Ctrl + F** and search for the string **prerouters**.

6. Enter the following lines in the text-box

```

send_via_VAULTASTIC:
driver = manualroute
domains = *.vaultastic.com
transport = remote_smtp
route_list = * cpanel-v4.vaultastic.com::25 byname
host_find_failed = defer

```

In the route list mention the dns as **cpanel-v4.vaultastic.com**

7. Scroll down and click the **Save** button.

8. Scroll down and click the **Save** button.
