

Step 3: Enable email archiving for users on other imap server

To archive mail from your mail server to Vaultastic, simply add journaling or mail routing rules to forward a copy of incoming and outgoing mail to the journal id on the vaultastic domain.

For example,

If your primary domain is acmecorp.com, and you wish to archive for john.smith@acmecorp.com, then the journaling rule should send a copy of all mail received and sent by john.smith@acmecorp.com to journal@acmecorp-com.vaultastic.com ().

Vaultastic does not support email archiving for email ids hosted on public email networks such as Yahoo, Gmail, Rediff etc.

Vaultastic supports connectors for your domains hosted on GSuite/Gapps, O365, Hosted Exchange etc.
