

# Logging into the Vaultastic Admin Panel

On successful provisioning of your Vaultastic domain, you would have received a mail with the Vaultastic access URL and the credentials of the default admin id on your registered email id.

- Enter the access URL in the browser address bar. The URL will be like **https://<domain name>.vaultastic.com**. For example, if your domain is **acmecorp.com**, the access URL will be **https://acmecorp-com.vaultastic.com**.
  - The login page will be displayed.
  - If you are logging in for the first time or have forgotten your Vaultastic account password, use the [forgot pass](https://docs.mithi.com/home/how-to-reset-forgotten-password-of-your-account) link to set a new password. Enter the password.
  - For enhanced security, your domain administrator might have enabled a Captcha image on the login page. Enter the characters seen in the image.
  - Click on the **LOGIN** button. On successful login, the Admin Panel interface will be displayed. You can [provision vaults](https://docs.mithi.com/home/how-to-provision-users-in-vaultastic), update domain and vault properties from the Admin Panel.
