Authenticating sent email

How should Office 365 identify email from your email server?

Choose how Office 365 will authenticate and accept email sent from your email server.

- By verifying that the subject name on the certificate that the sending server uses to authenticate with Office 365 matches the domain entered in the text box below (recommended)

- By verifying that the IP address of the sending server matches one of the following IP addresses, which belong exclusively to your organization

Activate Windows

Go to Settings to activate Windows.

How to identify email sent from your email server

Identify incoming messages from your email server by verifying that the subject name on the connecting TLS certificate matches this domain: mithiconnectxf.org, and the sender's email address is an accepted domain for your organization.
