

Getting Started with ClrStream

ClrStream comes in two plans. ClrStream Basic and ClrStream Continuity.

ClrStream Basic provides **Inbound and Outbound protection** for your mailing domain using the **Secure Mail flow** system.

ClrStream Continuity provides **Inbound and Outbound protection** for your domains using **Secure Mail flow** as well as an alternative way for your domain users to continue receiving mail and communicate over mail if the primary email server is down via a secondary mailbox. This **secondary mailbox** is hosted on the **SkyConnect** servers.

This document explains the easy steps to get started with ClrStream Basic or Continuity.
