About this webinar

Forwarding of email is a commonly used practice on most mailing platforms to automate workflow, preserve data in an alternate account, and more.

An analysis of our customer support interactions shows several conversations where the forwarding of email has caused data related risks for our customers. This includes data theft, Trojan horse embeds, eavesdropping, amongst others.

In addition, we also observed cases, where the forwarding of email is not given its due recognition as an internal security threat, which can go largely unnoticed.

Did you know that there are 9 different USES for forwarding of email and 6
