Export email data from the Active Store

The export option from the eDiscovery (https://docs.mithi.com/home/how-to-use-the-ediscovery-view-to-quickly-locate-mail-or-do-a-compliance-check)interface of Vaultastic uses the LegacyFlo engine to extract data from a vault to a PST or EML data file.

The contents of a vault are converted into one or more data files. The links to download the data files are shared via email.

Refer to the link here (https://docs.mithi.com/home/how-to-use-the-ediscovery-view-to-quickly-locate-mail-or-do-a-compliance-check#get-the-most-out-of-the-search-results) to get details of the process of submitting an export request.
