Reinforce business continuity- Securely share files online with Ideolve

This time is one of significant disruption and unprecedented challenges, and we are happy to note that many of our esteemed customers have been doing a tremendous job in this time of crisis.

Our customers, such as EMRI, M&M, DRDO, IPCA, Alembic, and more, have been working relentlessly at their tasks and duties.

Their work includes the supply of essential commodities like milk, 24×7 emergency service, managing big cities like Mumbai, keeping up the supply and production of essential medicines, creating affordable ventilators, and more.

Our customers are increasingly relying on email, phones, web meetings, and even social networking apps to bridge communication gaps during these trying times. However, to coordinate the flow of work, much effort is expended, and time lost.

Is there a better way?

Increasingly we have been relying on Ideolve, for the last three years, to overcome limitations of existing tools with team collaboration.

Hence we share one facet of collaboration – How to share files online securely with Ideolve and make work from home and team collaboration more effective.

In this webinar we cover:

- A big round of applause for your COVID-19 contribution
- How Mithi shares files with Internal/external teams
- Live case study of Ideolve in a customer support environment
- How secure is Ideolve
- Other use cases
- Our free offer exclusively for our clients
- Learn how to sign up for the exclusive free offer

Speaker:

Aditi is one of the co-founders at Mithi (https://www.mithi.com/). She has been leading product development for almost 15 years and with an overall experience of nearly 3 decades working with technology, creating widely used products and managing operations. Aditi is the most sought after person for technical advice. She regularly contributes to Mithi's technology blog (https://blog.mithi.com/).
