# Vaultastic Ver 4.1.1.0

## 15th Jan 2021

## Revision information

Vaultastic V4, version 4.1.1.0

## New Features

### Ingest Email into Vaultastic using an API

Vaultastic now allows you to ingest email into the Vaults using an API. This is in addition to the existing capability of ingesting email via real-time archiving over SMTP using the journaling capability of the primary mail solution.

This API provides you the flexibility to engineer your email sources and cater to a wider range of use cases.

[one clear annotated screenshot of the function - if applicable - else can skip]

**Major uses**

1. For high-volume mailboxes, use Vaultastic's new email ingestion API to overcome limits imposed by the journaling system at the primary mail server.
2. Program the ingestion of email from non-traditional email sources, using the API.
