- Links can be used to navigate to replies from original comment and vice versa.

- View screenshot

20th September 2019: Version 3.9.11.0

New Features

Tap user

- Refer users to view the content by tapping them to note or comment.

- You can even tap users on content owned by other users. Only the users part of the note can see the content.

- Tap notifications will be listed in the mentions list. Use the notifications to navigate to the content.

Improvements

Bug fixes

- Notes from other workspaces were listed in selected workspace on New Updates.

- Multiple fetch more notification requests were being fired which were actually not required

---

26th August 2019: Version 3.8.10.0

Improvements

- Search results are now by default sorted by date

15th August 2019: Version 3.8.9.0

New Features

Sorted search results by relevancy

- Search results are by default sorted as per relevancy. Most relevant data is listed on the top.

- Added an option to sort the search results by date or relevancy.

Improvements

Small list of improvements taken up to discard some irritants

- Unable to add comment to a note when accessing using search results.

- Search is not fired on modifying the search string in some cases.

- Refresh to update button is displayed on each re-login popup.

24th July 2019: Version 3.7.8.0

Improvements

- We have made performance improvements in fetching update tour steps for better experience.

16th July 2019: Version 3.7.7.0

Improvement

- Added a user hint to refresh the page to load new application updates.

12th July 2019: Version 3.7.6.0

New Features

Guided tour on New Updates

- Application will take user on guided tour to new updates/features added to the application

---

26th June 2019: Version 3.6.6.0

Improvements

In search query

- Each string term is treated as a separate search term.

- String within quotes will be treated as a single term.

21st June 2019: Version 3.6.5.0

New Features

Introducing Quick tour for help on how to use ideolve

- Take a quick tour to understand the elements of ideolve and how to use them

- View list of updates made on ideolve

- Check the updates section to find out what changes have been made to Ideolve

29th April 2019: Version 3.5.5.0

Improvements

Small list of improvements taken up to discard some irritants

- Search term is ignored when an html content is copied and pasted in search box.

- undefined in search text, when text is not present in search history.

- Not able to search for words containing #,^,@ within the string.

- Search history popup remains open even when user clicks outside the popup.

- Updates in comments attachments were not updated in current note.

- When user is in search state and refreshes the page, the note list is reset to All Notes but on selecting a note from the list, the app fires the search again.

24th April 2019: Version 3.5.4.0

New Features

Introducing Pin notes

- You can now pin your notes to the top of the notes list

- This feature helps you to keep the focus on the important notes you are working on.

- You can pin up to 3 notes.

Improvements

- No note is selected by default on login or while switching the list.

- You can now choose what note to display. Earlier, first note in the list was selected which was like bombarding you with the information of that note irrespective of you wanted to view that note.

- Helps improve UX responsiveness on first load.

09th April 2019: Version 3.4.3.0

New Features

Introducing multiple Tag List views

- View Recently used Tags

- View Most used Tags

- Search tags in the list

- You can now view the associated notes with the tag on selecting the tag.

Improvements

Share note interface

- Widget enables user to first choose the workspace before selecting users to share the note

- Workspace name is shown in share note widget for already shared note.

25th March 2019: Version 3.3.2.0

New Features

Pin your favorite workspace

- You can now Pin your favorite workspace at the top for easier navigation

- You can pin upto 3 workspaces

Improvements

In workspace list

- Workspace list is now alphabetically sorted

- By default, upto 5 workspaces are displayed in a workspace list excluding pin workspaces.

- Other workspaces can be accessed on expanding the list by clicking on more.

22nd March 2019: Version 3.2.1.0

New Features

Introducing All notes filter

- You can now view all notes across workspaces in single list.

- This will help keep you updated for activities across workspaces. If you still want to work on specific workspace, you can choose the workspace from the workspace list.

- Searching across workspaces

- You can now find the data across workspaces by searching in All notes list.

- New notes will be created in My Space

- My Space is your private workspace meant for keeping your personal notes

- By default, the system chooses the chosen workspace to create the note. If you are using All notes or All my notes filter, notes will be created in My Space.

- On sharing the note, you need to select the collaborative workspace to share the note in.

Improvements

Create workspace

- Create new workspace flow improvements while sharing the note from personal workspace.

13th March 2019: Version 3.1.0.0

New Features

Change in URL's

- Updated Ideolve URL link formation

- These links also contain meta-data to show the preview of the Published note when shared on the social mediums like whatsapp etc.

- Links also contain data which will enable navigating to specific entity from email notifications directly to Ideolve mobile app [development within mobile app is still in progress and will be released early next week]

Improvements

In search interface

- When user clicks on search bar, search history is displayed with the special identifier ^ displayed to the user.

- ^ identifier can be used anytime within the search interface to fetch the search history
