New Feature

SkyConnect Usage Dashboard

SkyConnect Administrators can now see the SkyConnect Usage summary for all their SkyConnect domains using the dashboard. The dashboard gives a day-wise consumption of users, storage, and logins for the domains. Admins can also use the dashboard to view key user attributes.

New Features

New editor in Baya, the web client, which improves your mailing experience

In this new release we have rolled out a new editor in Baya4, the web client, which improves your mailing experience as follows:

1. Maintain original formatting while copying/pasting content from MS Word, Excel, and other office software. You do this often to share pieces of the original document with your contacts, and having the content come as-is improves your productivity and presentation.

2. Full-screen mode (or focus mode) to enable you to compose long emails without distraction.

3. Drive home your point in your emails with more options for

   - rich-text formatting such as inserting videos, emoticons, special characters
   - adjust line-heights to make your emails more readable
   - quote portions of your email to highlight them
   - ready-made styles for quicker formatting.

4. The same richness can be used in your email signatures too, for improving your branding.

www.mithi.com
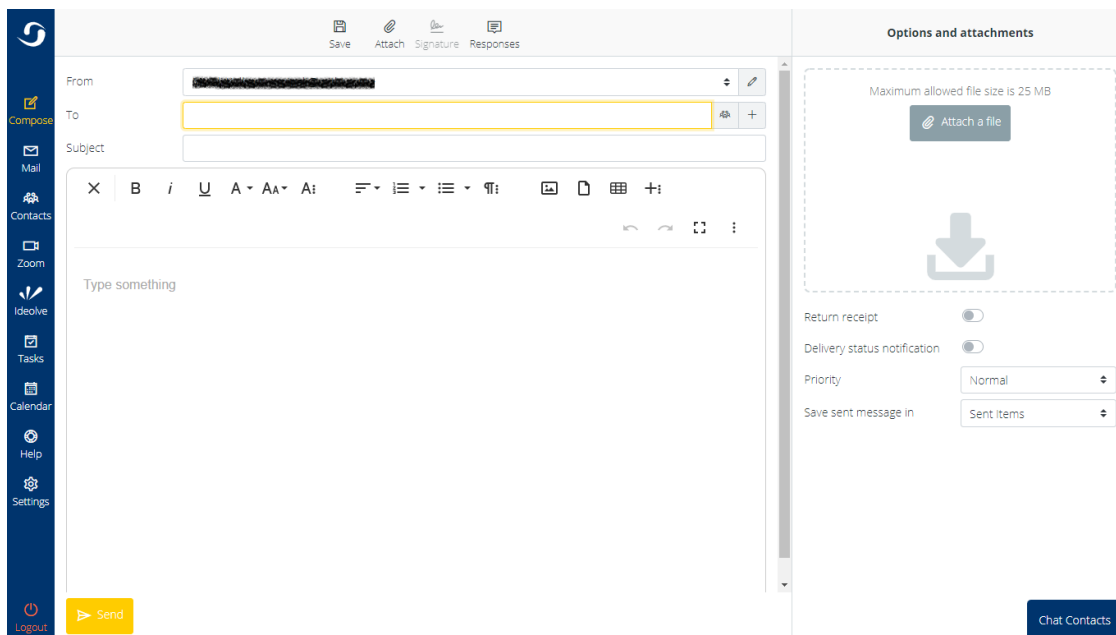

By default, this editor is not switched on for your domain. You can do so by following the instructions here
(https://docs.mithi.com/home/choose-editor-for-mail-client-baya-4) .

For more information see

- Choosing the editor on the Compose & Signature pages (https://docs.mithi.com/home/choose-editor-for-mail-client-baya-4)

04th Oct 2021

New Features

Video conference using Zoom integrated with Baya

The Baya Zoom integration allows users to initiate and manage their zoom meetings from within the SkyConnect application. Using the integration, they can keep a track of all the meetings initiated by them, send email invites, update the participants list etc.

Past and upcoming zoom meetings will also be visible through the interface.

For more information see

- Video Conference using Zoom (https://docs.mithi.com/home/video-conference-using-zoom)

Improvements

- Drag-drop email id into the to/cc/bcc fields of the compose page
- Horizontal bar when vieing mail in full screen mode
- Calendar create/modify times to be shown in local time zone
- Task create/modift times to be shown in the local time zone
- Reset password and reload calendar button on the calendar page
- Handling of daylight saving tie in calendar
- Updates to the help plugin
- Option to use server side filtering
- Message body in replies to have the original recipient details
- Improvements to password expiry handling

New Features

Mithi SkyConnect now has an upgraded Email Security Gateway (ESG) that runs on the SpamTitan platform.

Besides rock-solid malware protection, SpamTitan improves your experience of managing email security with these new capabilities:

- An improved Domain Management console giving you more control.

- Blacklist and Whitelist control in your console, boosting productivity.
- Export options for reports enabling offline analysis.
- A more friendly and usable quarantine digest report, including outbound emails too.
- More possibilities to automate routine tasks with their API.
