

# Preparation of S3 bucket for LegacyFlo

## A. Create an S3 bucket on AWS

**Note:** We recommend that you use a single S3 bucket in your AWS account to receive LegacyFlo request output.

Create your S3 bucket in a supported region and allow list and write access to LegacyFlo. The steps for the same are given in the links below:

1. [Get an AWS account](https://docs.mithi.com/home/faqs-aws-s3#how-do-i-get-an-aws-account-) (<https://docs.mithi.com/home/faqs-aws-s3#how-do-i-get-an-aws-account->).
2. [Create an S3 bucket](https://docs.mithi.com/home/faqs-aws-s3#how-do-i-create-a-s3-bucket-) (<https://docs.mithi.com/home/faqs-aws-s3#how-do-i-create-a-s3-bucket->) in a region supported by Mithi.
3. Set a temporary bucket policy to allow LegacyFlo to get the name and region of the buckets as [mentioned here](https://docs.mithi.com/home/s3-access-and-data-retrieval) (<https://docs.mithi.com/home/s3-access-and-data-retrieval>).
4. When the S3 bucket is used as a **source, give list and read access** to the objects on the bucket and when the S3 bucket is used as a destination, **allow list and write access to LegacyFlo. The steps to do so are mentioned here** (<https://docs.mithi.com/home/s3-access-and-data-retrieval>).

## B. Register your S3 bucket as a source/destination S3 bucket on LegacyFlo

For LegacyFlo to upload data to your S3 bucket, it needs to be added to as a destination S3 bucket in LegacyFlo. The steps for doing the same are as given below:

**Note:** This step has to be done only once for each destination bucket.

1. [Login to LegacyFlo](https://docs.mithi.com/home/how-to-login-to-the-legacyflo-application) (<https://docs.mithi.com/home/how-to-login-to-the-legacyflo-application>)
2. Click on the Initials icon on the top of the left-most pane.
3. Select Register S3 bucket
4. Click on Add S3 bucket button. A dialog box will pop-up
5. On the **Prepare Bucket** page, you will be shown the list of steps to be completed to create and grant access to the S3 bucket. Confirm that you have done as instructed and click on **I confirm that the above configuration is complete.**
6. Click **Continue**
7. On the **Configure, Verify & Save** page, give the **Bucket Name** and select the **Bucket Region**.
8. Click **Verify**. LegacyFlo will check the access to the bucket.
9. If LegacyFlo cannot access the bucket, you will be shown an error message similar to **All access to this object has been disabled. Check S3 access rights and name and retry.**
10. If the connection is successful then click on **Save**. LegacyFlo will remember this S3 for further requests.
