S32S3-Move

Overview

The **S32S3-Move** request type can be used to move files from one S3 bucket to another. The source and destination can be your S3 buckets or also the buckets used to host the Vaultastic Open and Deep Stores.

On successful copy, the files will be available on the destination and removed from the source.

Before submitting any of the requests, the source and destination buckets have to be registered with LegacyFlo as mentioned here. (https://docs.mithi.com/home/preparation-of-s3-bucket-for-legacyflo)

The following sections give the details of the parameters to be specified for each request.

Source information (S3 bucket)

FIELD NAME	DESCRIPTION
S3 Bucket Name	This field is compulsory. The S3 bucket that has the source file to be copied. Select the S3 bucket name from the drop-down list. The list will show • S3 buckets in your AWS account registered with LegacyFlo • the bucket hosting your **Vaultastic Open Store(mithi-ind1-vaultastic-legacystore).** • the bucket hosting your **Vaultastic Deep Store**
S3 Folder path	If the source files are on the **Vaultastic Open Store or Vaultastic Deep Store**, then this parameter should have the name of your Vaultastic domain. **Example: baya-com.vaultastic.com** If the file is on your **own bucket**, give the **root folder which contains the files**. Leave this value empty if the source file is on the root of the S3 bucket or the folder name is specified in the CSV file. **NOTE**: S3 folder path should not start or end with a "/"

FIELD NAME	DESCRIPTION
CSV file	This is an optional field. This file can be used to give a fixed list of files to be copied or synced. Each row is a file name. Select the CSV file with the list of files to be copied. The file should have a single column. The first row is the header, with the keyword **FileName**. Subsequent rows will have the names of the files on the source bucket in the specified path. Each CSV file should not have more than 1500 filenames. The file name will be appended to the values of S3 Bucket Name and the S3 Folder Path.
Since date	This is an optional field. Only files which have been created or modified on or after the specified date will be considered. **Note:** If this field is specified along with a list of files, then only the files which have been created or modified will be considered, the others will not be synced or copied to the destination.

Destination information (S3 Bucket)

FIELD NAME	DESCRIPTION
S3 bucket name	This field is compulsory. The S3 bucket for the destination files. Select the S3 bucket name from the drop-down list. The list will show • S3 buckets in your AWS account registered with LegacyFlo • The bucket hosting your **Vaultastic Open Store(mithi-ind1-vaultastic-legacystore).** • The bucket hosting your **Vaultastic Deep Store.**
S3 folder path	If the files have to be copied on the **Vaultastic Open Store or the Vaultastic Deep Store**, then this parameter MUST have the name of your Vaultastic domain. **Example: baya-com.vaultastic.com** If the files have to be copied on your **own bucket**, give the **folder which will contain the file**. Leave this value empty if the destination file has to be created on the root of the S3 bucket. **NOTE**: S3 folder path should not start or end with a "/"
